

Training and Test Environment Release Process

Ask the Head of Technology what version is required to release to the Training and Test environment;

In the following order:

1. Go to the pipeline and release that version for the Infrastructure repo to Training. Get approval if required;

2. Re-Build the application that has the migrations to be released locally.
3. Run the following Powershell script: `generate.ps1` on this locally.
Run the `out.sql` file it creates in the same folder against the Training or Test database (iqms-server-training.database.windows.net,1433 or iqms-server-test.database.windows.net,1433). This applies all database migrations that have not been applied;
4. Go to the pipeline and release that version for the API repo to Training. Get approval if required;
5. Go to the pipeline and release that version for the BFF repo to Training. Get approval if required; and
6. Have the Frontend released to Training.
